

## **PROBLEM - SOLUTION FIT**

### **PROJECT NAME : A NOVEL METHOD FOR HANDWRITTEN DIGIT RECOGNITIONSYSTEM**

**Team Members: C.Raguraman.M.Muthu.B.Magesh.T.Sabastin**

<b>1.CUSTOMER SEGMENT(S):</b>  <div>The Customers who deal with handwritten digits like Banking sectors , schools , colleges , railways , firms , etc.</div>	<b>5. AVAILABLE SOLUTIONS</b>  <div>There are no widely used software's to detect handwriting; instead, they check with other people to affirm what number it is.</div>	<b>8. CHANNELS OF BEHAVIOUR</b>  <div>Using software that is available on the internet. Obtaining assistance from those nearby in order to recognize the digits written by their customers.</div>
<b>2. JOBS-TO-BE-DONE/PROBLEMS:</b>  <div>Handwritten digits can be difficult to understand and interpret at times. It may cause errors when dealing with rough handwriting.</div>	<b>6.CUSTOMER CONSTRAINT(S):</b>  <div>They believe that the alternatives will result in errors and faults and will be inconvenient.</div>	<b>9. PROBLEM ROOT CAUSE</b>  <div>We face numerous challenges in handwritten number recognition. because of different people's jotting styles and the lack of Optic character recognition This investigation offers an in-depth comparison of various machine literacy and deep literacy</div>
<b>3. TRIGGERS</b>  <div>To obtain the numbers accurately and quickly.</div> <b>4. EMOTIONS :BEFORE/AFTER</b>  <div>Feels frustrated and sad when numbers are not entered.</div>	<b>7. BEHAVIOUR</b>  <div>Finding the best software for detecting accurate digits in a more efficient manner</div>	<b>10. YOUR SOLUTION</b>  <div>A solution to this problem is the Handwritten digit recognition system, which uses a picture of a digit and recognizes the digit present in the image. Convolutional Neural Network model built with PyTorch and applied to the MNIST dataset to recognize handwritten digits.</div>
